Community standards for
the 21st century and beyond.

Professional Advancement of Community

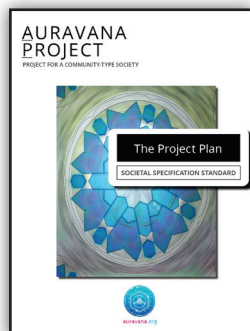

Every society is composed of the following types of standards. Different types of societies have different internal compositions of these societal systems standards. The composition of these systems determines the type of society. The type of society under development by Auravana Project working groups is a, community-type society. These specification standards may be used to construct and duplicate community at the societal level. The standards are below:

AURA/SSS-SS-001

THE SYSTEM OVERVIEW

This publication is the overview for a community-type society.

AURA/SSS-PP-001

THE PROJECT PLAN

This publication is the project plan for the creation and operation of a community-type society.

#Moneyless and **#Coercionless** societal systems can be built with our community-based societal specification standards

Professional Advancement of Community

In order to bring real and measurable fulfillment to a global population, the Auravana Project exists to co-create the emergence of a community-type society through the openly shared development and operation of a unified societal information standard, from which is expressed a network of integrated city systems, in which purposefully driven individuals

are fulfilled in their development toward a higher potential life experience for themselves and all others. Significant project deliverables include a societal standard and a highly automated network of habitat service operations.

SOCIETY AS AN ICEBERG

(help me understand the system makeup of society, an analogy)
