Project Auravana provides the socio-technical standards for living together globally as a community, sharing resources, information, interests, and life. The standards describe a functional human community.

THE EARTH

THE UNIFIED SOCIETAL SYSTEM

THE SOCIETAL SUB-SYSTEMS

THE ECONOMIC HABITAT SERVICE SYSTEM (GLOBAL HSS)

THE NETWORK OF INTEGRATED CITY SYSTEMS

THE CITY HABITAT SERVICE SUB-SYSTEMS (LOCAL HSSs)

CITY SYSTEM OPERATIONAL PROCESSES

*Help us put the socio-technical standard for community in the hands of everyone.*

Help set a good life style for everyone, where everyone has a good quality of life. The fulfillment of all of my needs for life, technology, and exploratory support given the best level of access humanity has access to now. The fulfillment of my need for contribution and the creation of community.

FULFILLMENT FOR LIFE

Mission: Global human fulfillment

Vision: Habitat service system network

Approach: Transparent societal information systems standard

We are here together with you

We are with you in facilitating community in your neighborhood, locally and globally

CREATE A LIFE AND SOCIETY THAT YOU LOVE

Greetings. Our names are Elizabeth and Travis, and we are coordinators at the Auravana Project. The Auravana Project is dedicated to creating open source and free shared standards (and models) for community-type living. The Project produces a set of socio-technical standards for the conception and operation of a community-type society. Herein, community is a societal-level organization that regeneratively orients individuals toward their highest potential of human need fulfillment.

The Project's socio-technical standards are freely available for download:

auravana.org/standards

See how we can create community, together.

PARADISE DESIGNED FOR ALL

#moneyless
#coercionless

THEY SAID WE COULDN'T

WE ALREADY DID

Building Community
One city at a time

Need to Know

Our proposal is for Community, for the operation of a community-type soceity:

The Project proposes a community network of socio-economically integrated city systems developed and operated through a unified, global societal standard. Auravana is a societal standards setting organization with working groups and an open source structure to sustain an operating society. A community-type society is a model for global human flourishing through cooperative design and action toward the production, distribution, and utilization of access [to information, objects, and people].

THE AURAVANA PROJECT

The Auravana Project is here to integrate the world's knowledge and understandings into the design of a constructible, duplicable, and scalable societally-based community system. The design for this system is separated out at a high-level into four specification standards. These standards detail the logical derivation and technical operation of the system, and are the living reference documentation to be used in the society's construction, operation, and duplication.
